

TUNNING NEW HANDSET TO ROLLER SHUTTER

- 1 - Turn off only the shutter that you will tune the new handset (easiest way is to disconnect this shutter from power source inside roof space – maybe open the tile above the shutter and disconnect plug)
- 2 – Wait 5 seconds with the power off
- 3 – Press and hold down the up bottom ▲ on new remote until the blue light stops flashing and stays on
- 4 – Turn on the power on the shutter – reconnect plug (motor should move)
- 5 – Press up again twice
- 6 – Handset should be tuned to the motor.

Alternatively, if the existing remote is working (may change the battery again just to make it works), you can use the existing remote to tune the new one (then you don't need to touch the power on shutter). If so, follow these steps:

- 1 – On existing remote, press and hold down the stop bottom ■ until the light stops flashing (shutter should beep)
- 2 – On the new remote press up once ▲
- 3 – New handset should be tuned to the shutter.
